

IS105 - ENTERPRISE ARCHITECTURE

MR. NIL CARLO M. DELA
CRUZ INSTRUCTOR

ENTERPRISE ARCHITECTUR E TOOLS

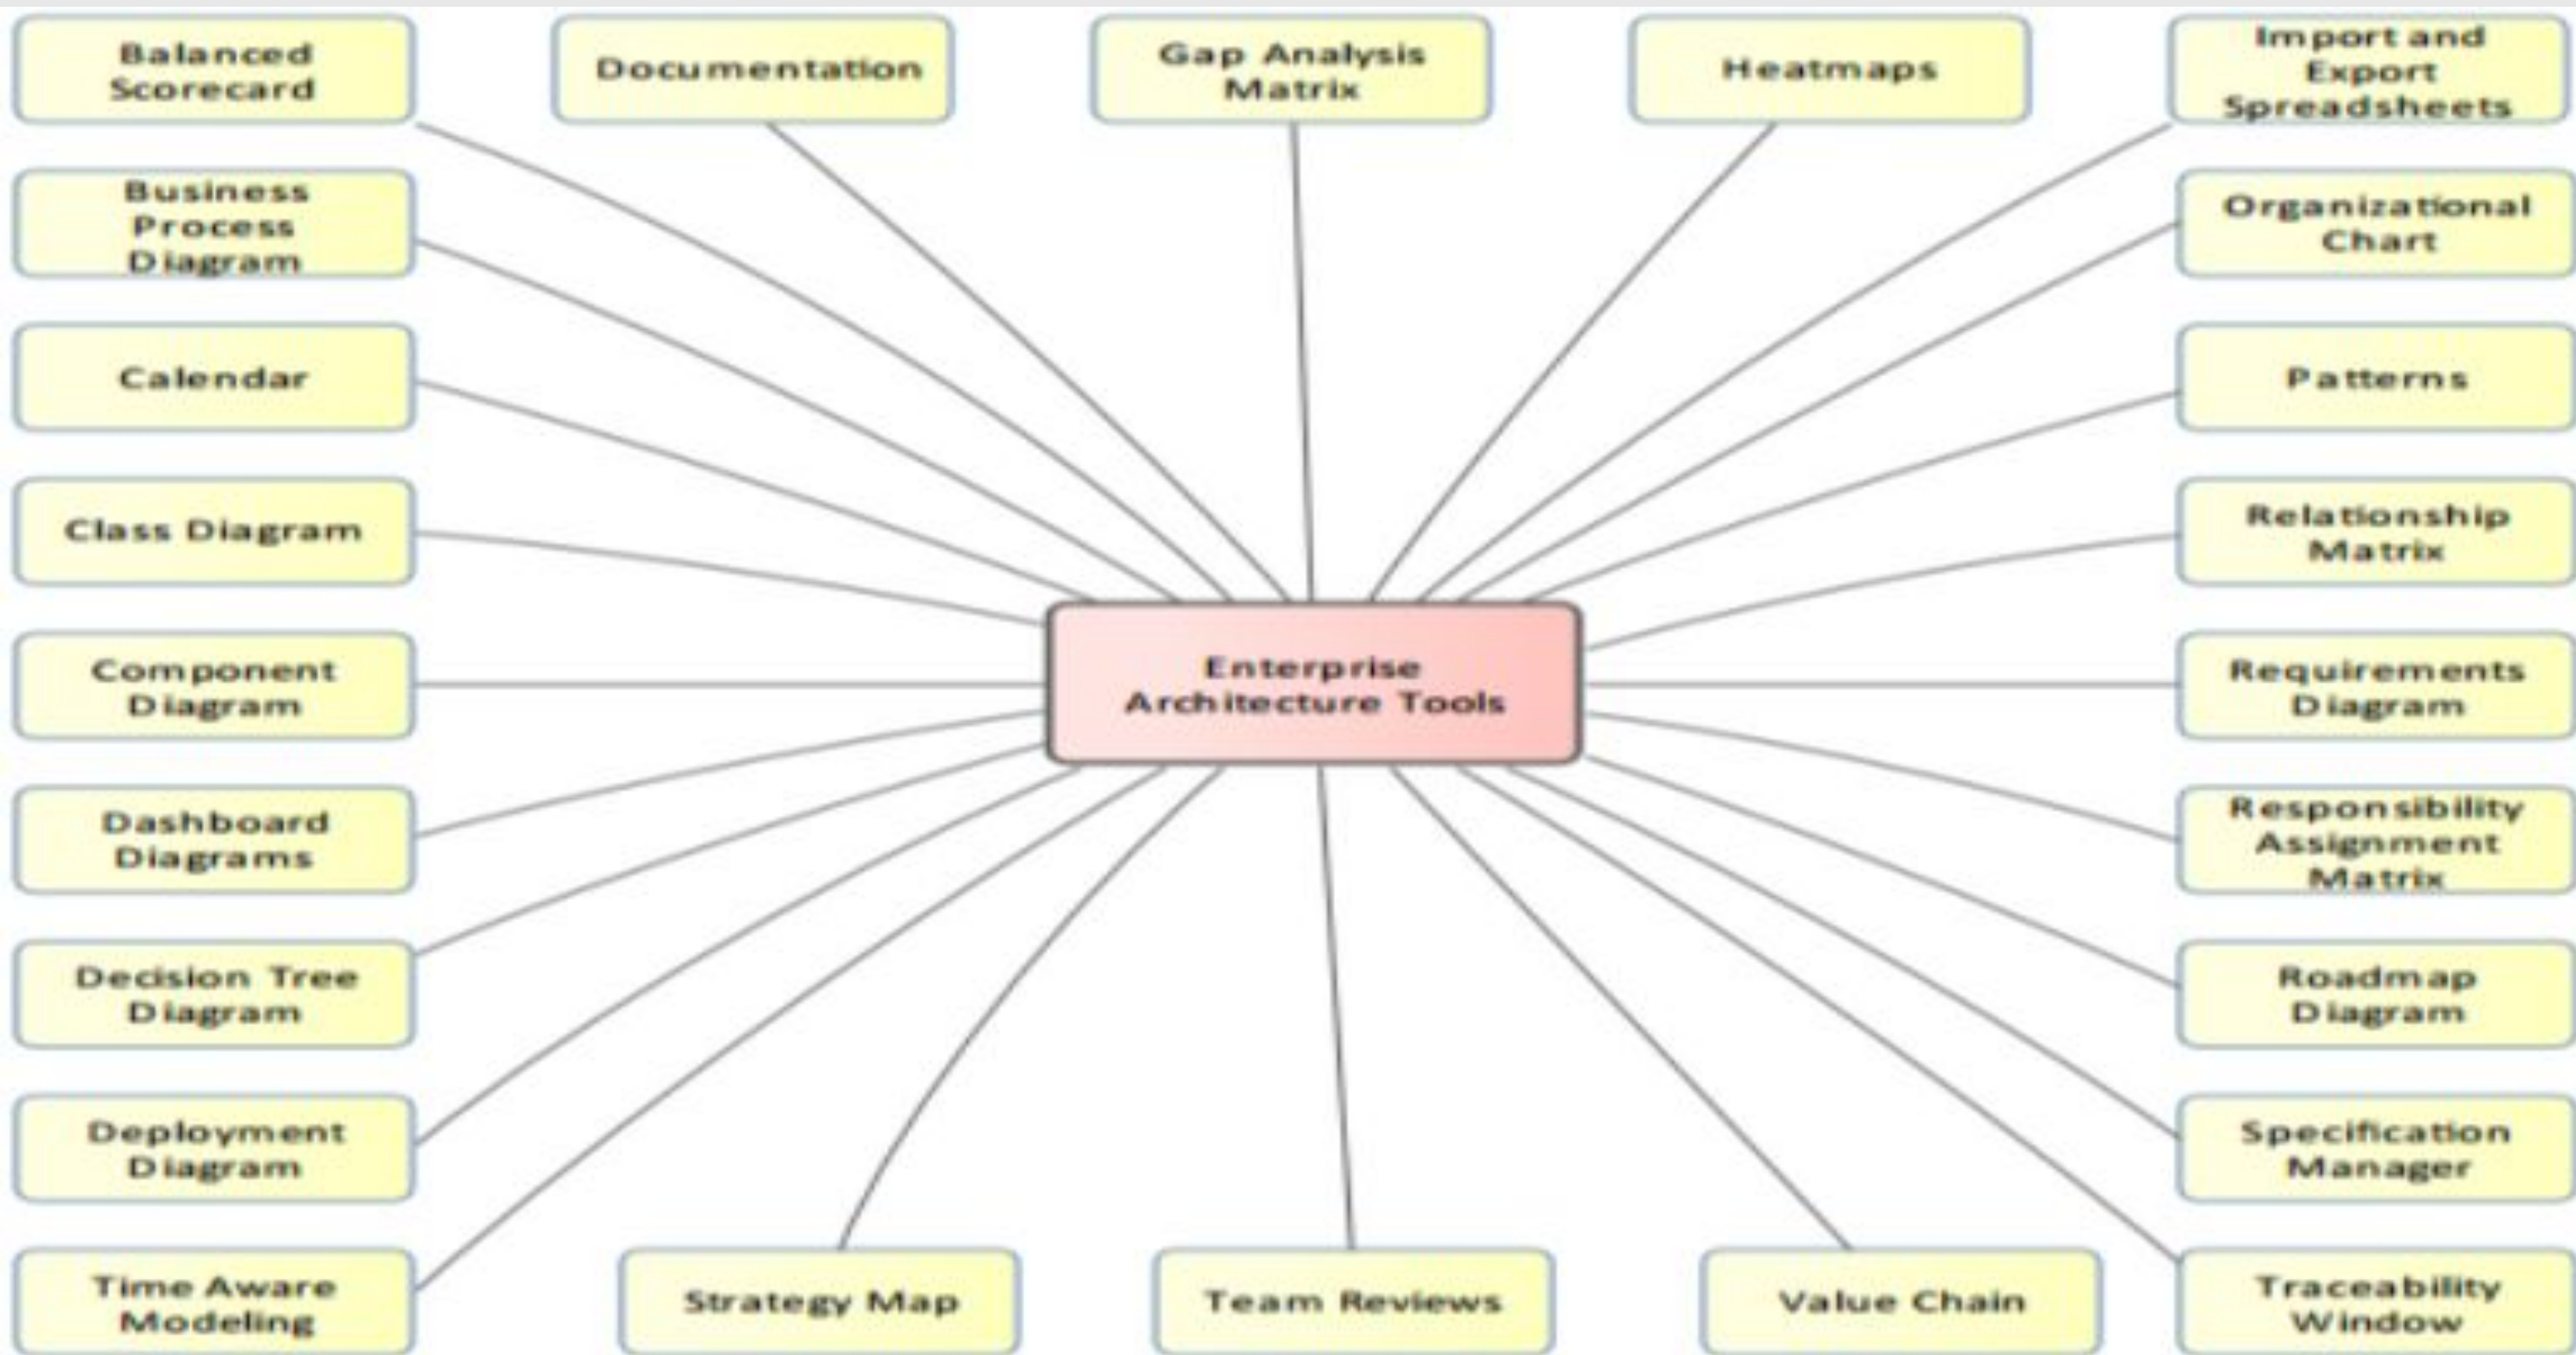

AT THE END OF THIS LESSON, YOU SHOULD BE ABLE TO:

- Familiarize with the Enterprise Architect tool.
- Be conscious how important Enterprise Architect both as an architecture repository and a tool for managing architecture projects.
- Learn how to use Enterprise Architect tool for planning, developing and documenting

ENTERPRISE

ARCHITECT

- A unified repository and project management solution for end-to-end architecture governance.
- Supports any architecture framework with multi-view flexibility.
- Enables lifecycle management from planning to implementation governance.

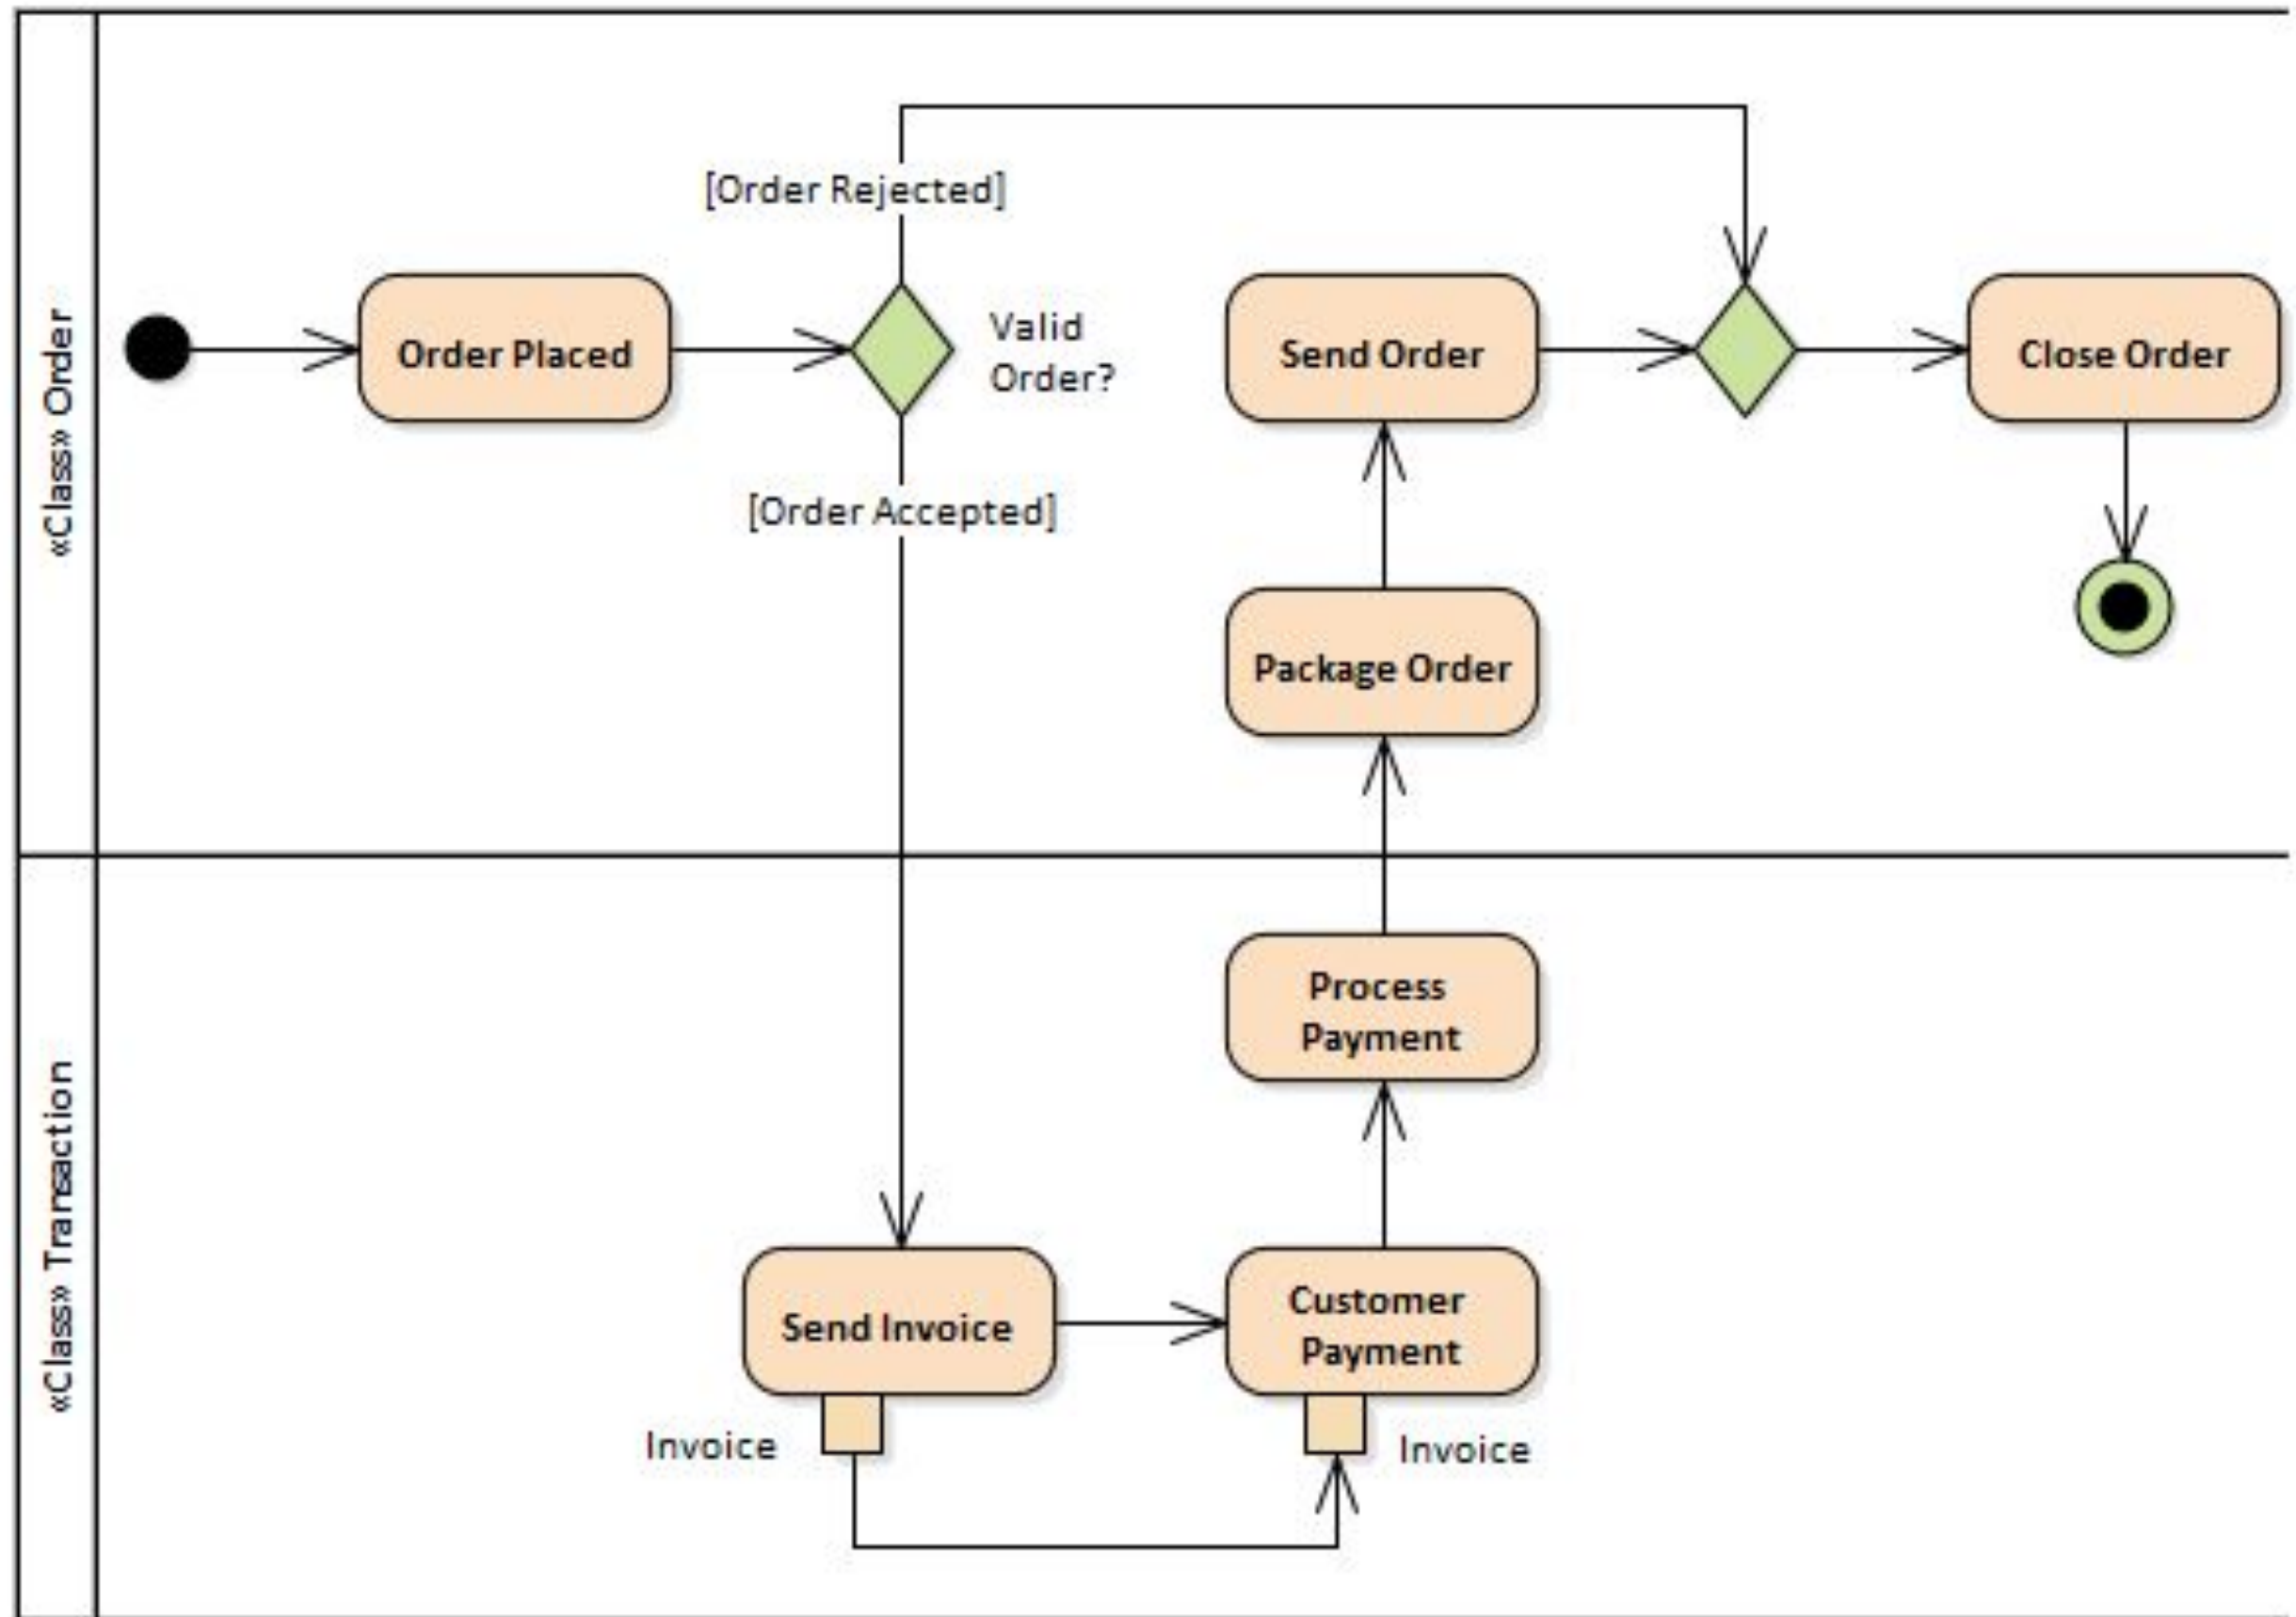

ACTIVITY DIAGRAM

ACTIVITY DIAGRAM

- Models business/technical processes as step sequences using UML behavioral notation.
- Visualizes control flows with decisions, forks, and joins for complex workflows.
- Alternative to BPMN for hierarchical process decomposition and algorithm design.

Activity Diagram showing the use of Partitions

This diagram shows the use of Partitions (swim lanes) to organize the elements and these can be orientated horizontally or vertically. They act as a container for the elements in the Project Browser. The diagram also shows the use of Output and Input pins connected by an Object flow.

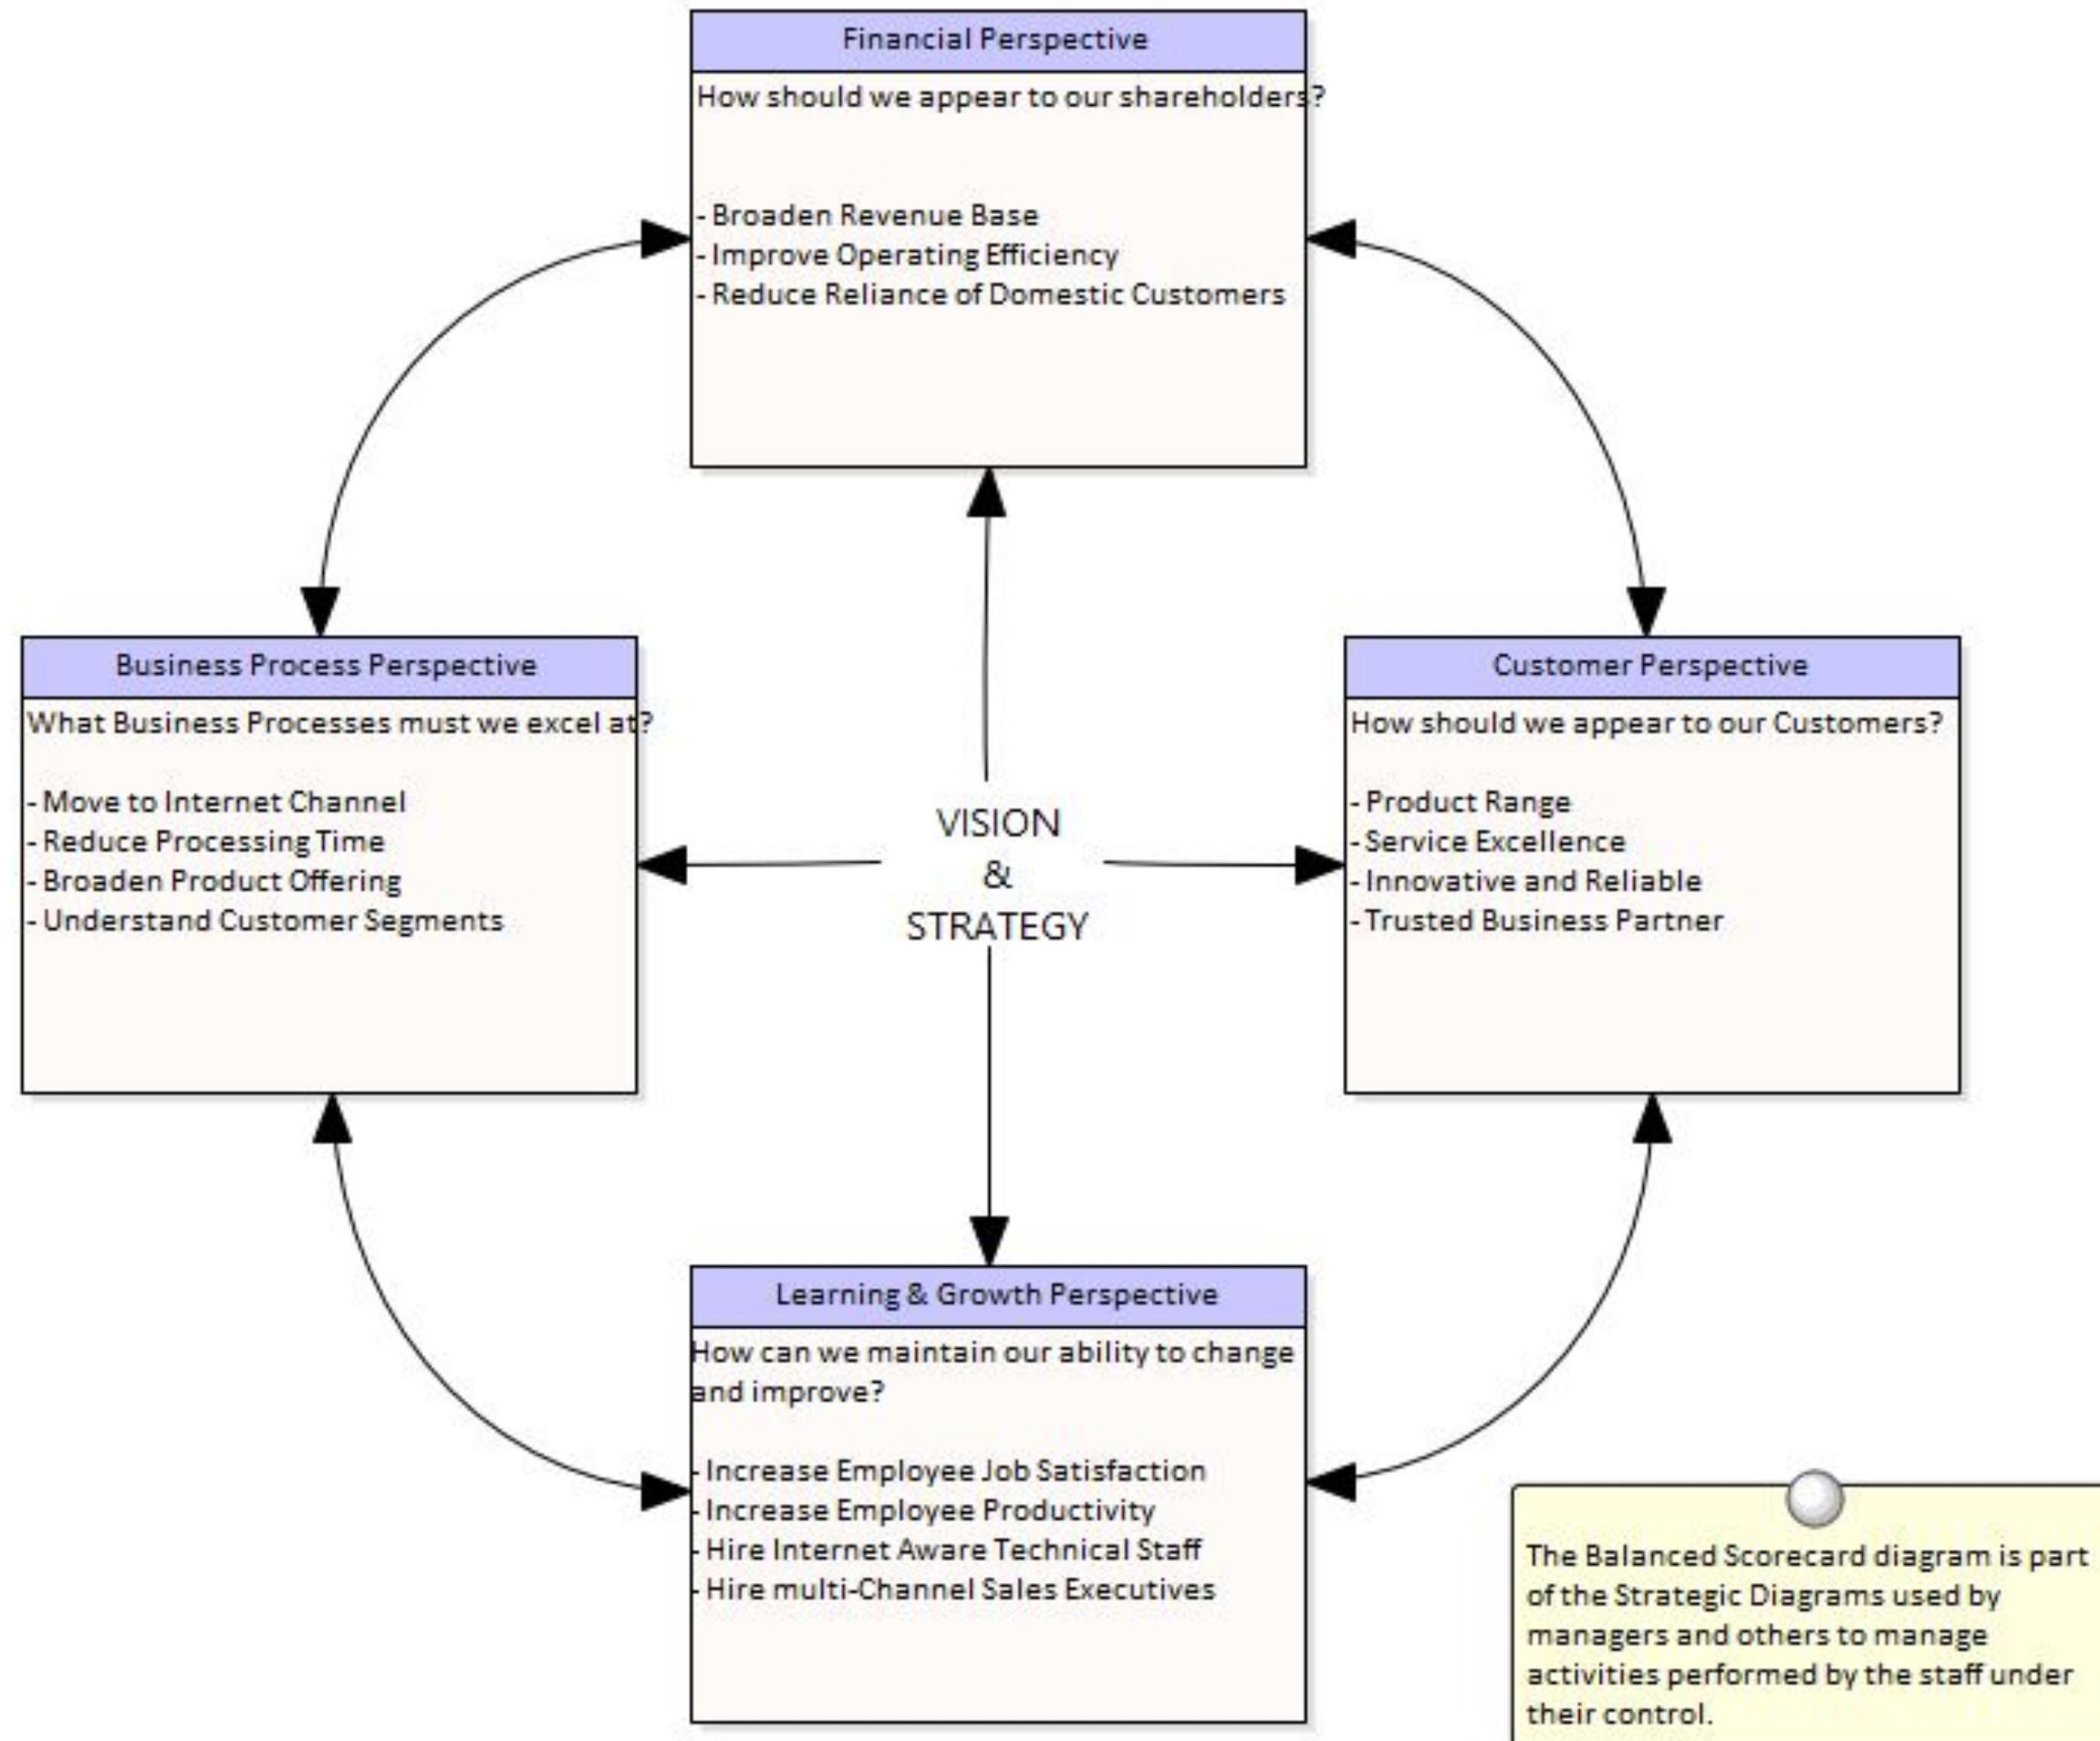

BALANCED SCORECARD

D

BALANCED SCORECARD

- Strategic diagram aligning performance metrics across Financial, Customer, Process, and Growth perspectives.
- Monitors organizational strategy execution through quantifiable goal tracking.
- Enhances strategic communication by linking activities to vision.

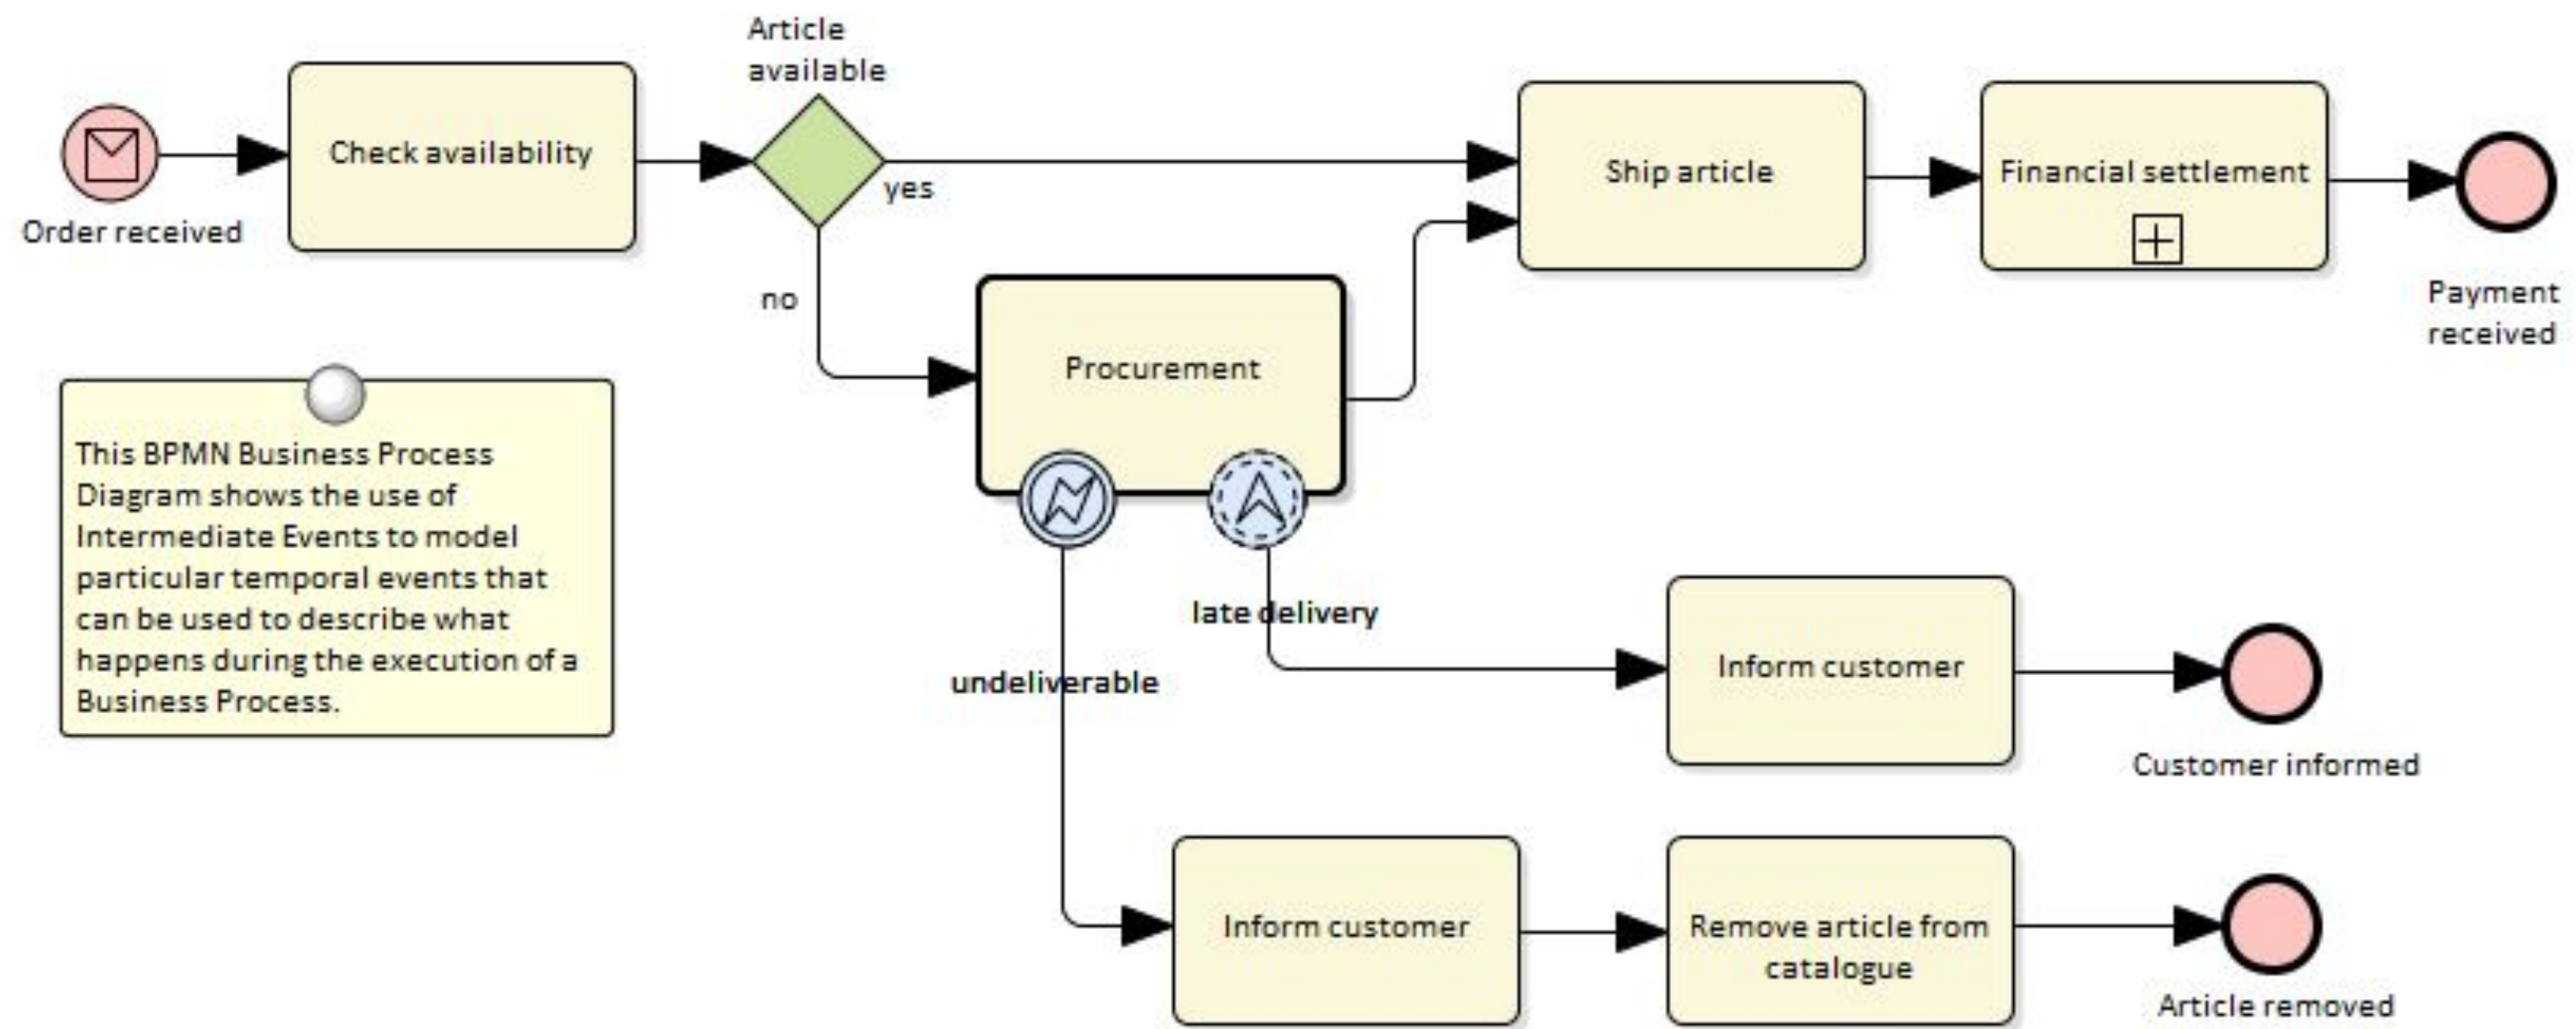

BUSINESS PROCESS DIAGRAM

BUSINESS PROCESS DIAGRAM

- BPMN-standard diagram for end-to-end process modeling with events, gateways, and lanes.
- Documents current/future state processes at any organizational level.
- Establishes process hierarchies with standardized naming and structure.

Business Process Order Fulfillment

CALENDAR

CALENDAR

- Centralized event scheduler for workshops, milestones, and resource allocation tracking.
- Integrates project tasks with model elements for traceability.
- Visualizes resource assignments through day/week/month views.

CLASS DIAGRAM

CLASS DIAGRAM

- UML structural diagram for business/technical domain modeling.
- Defines entities, relationships, and constraints for XML schemas or business rules.
- Logical foundation for database design and capability mapping.

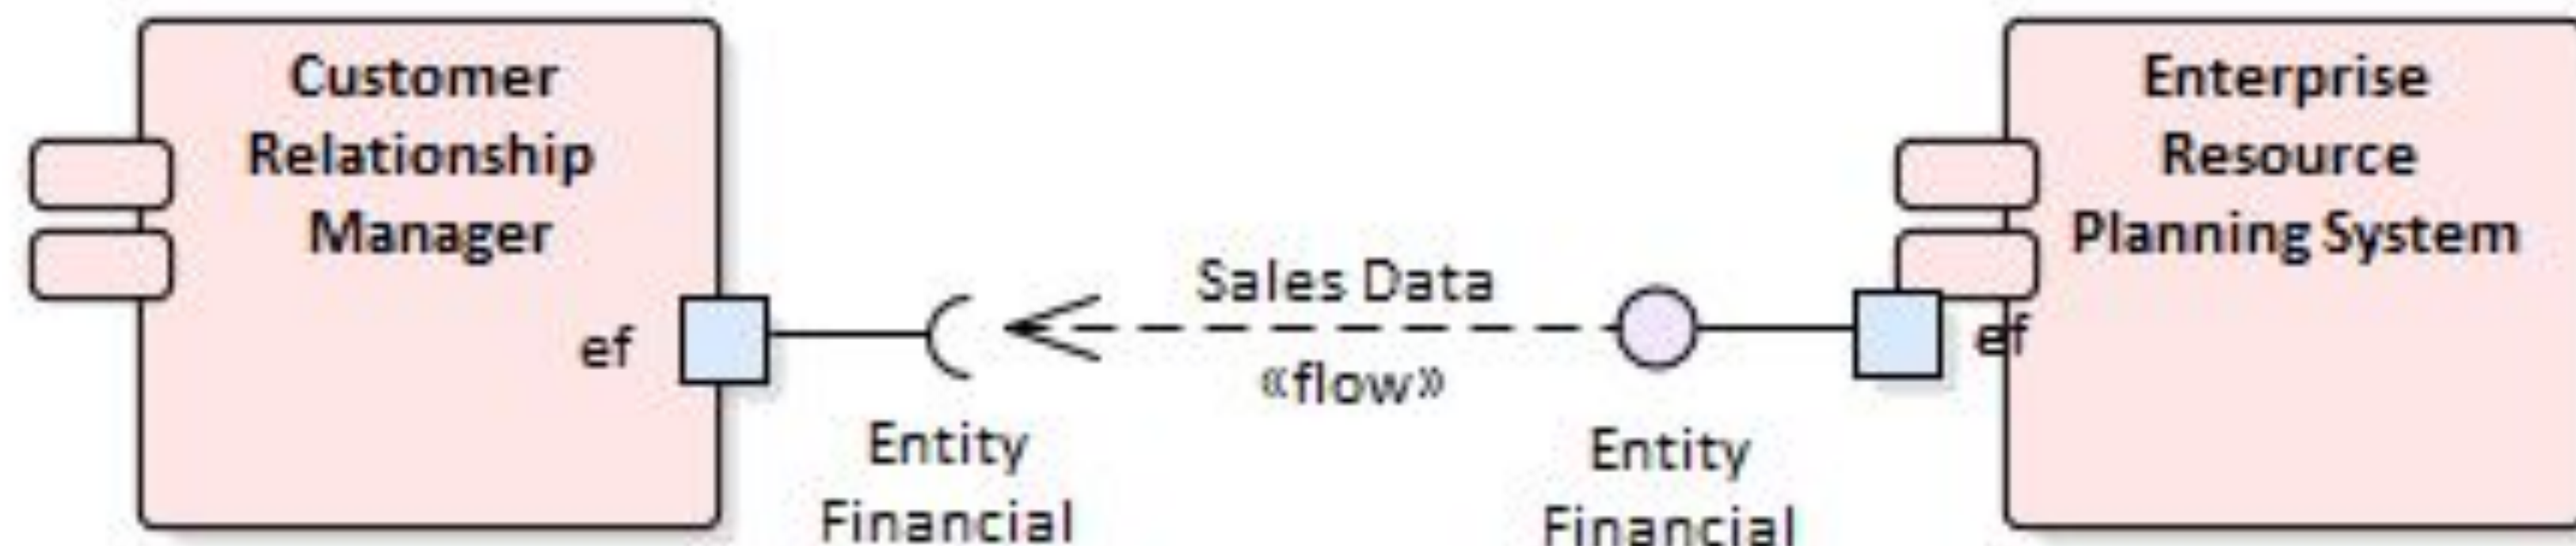

This diagram shows how a class diagram can be used to create a conceptual model that describes and relates the business vocabulary. The elements have notes describing their purpose and associations relationships and multiplicities describe how they relate to other business terms.

COMPONENT DIAGRAM

COMPONENT DIAGRAM

- Models logical/physical system components with interfaces and dependencies.
- Visualizes application architectures and integration points.
- Compares current/future states through port-interface wiring.

This Component Diagram shows the use of Ports and Provided and Required Interfaces and Information Flows to show what information flows between two Enterprise Systems at an Architectural Building Block Level.

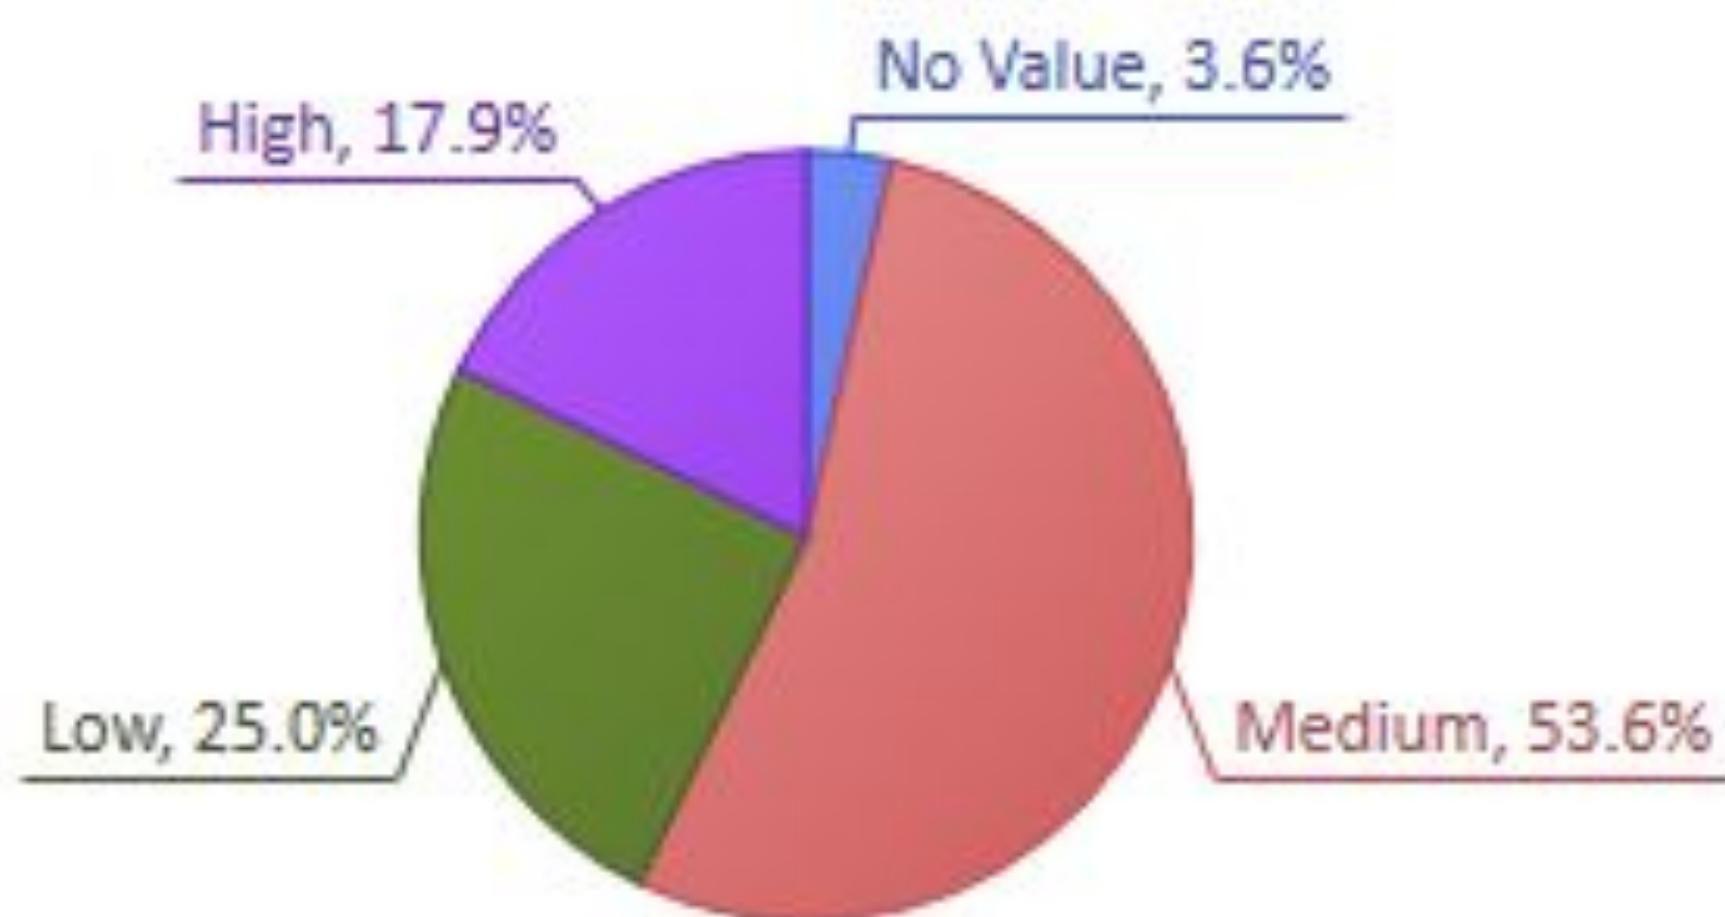

DASHBOARD DIAGRAM

DASHBOARD DIAGRAM

- Generates charts/graphs from repository data for visual analytics.
- Tracks requirement statuses, priorities, and project readiness.
- Supports Agile planning with real-time progress snapshots.

Elements by Priority

This diagram shows a Pie Chart element depicting element priority for all the requirements in a selected package.

It provides a useful summary for a requirements manager and is dynamically updated when the Priority changes and the diagram is reopened.

There are a range of other pre-defined charts and user defined charts can also be added. A filter has been added to exclude all elements other than Requirements.

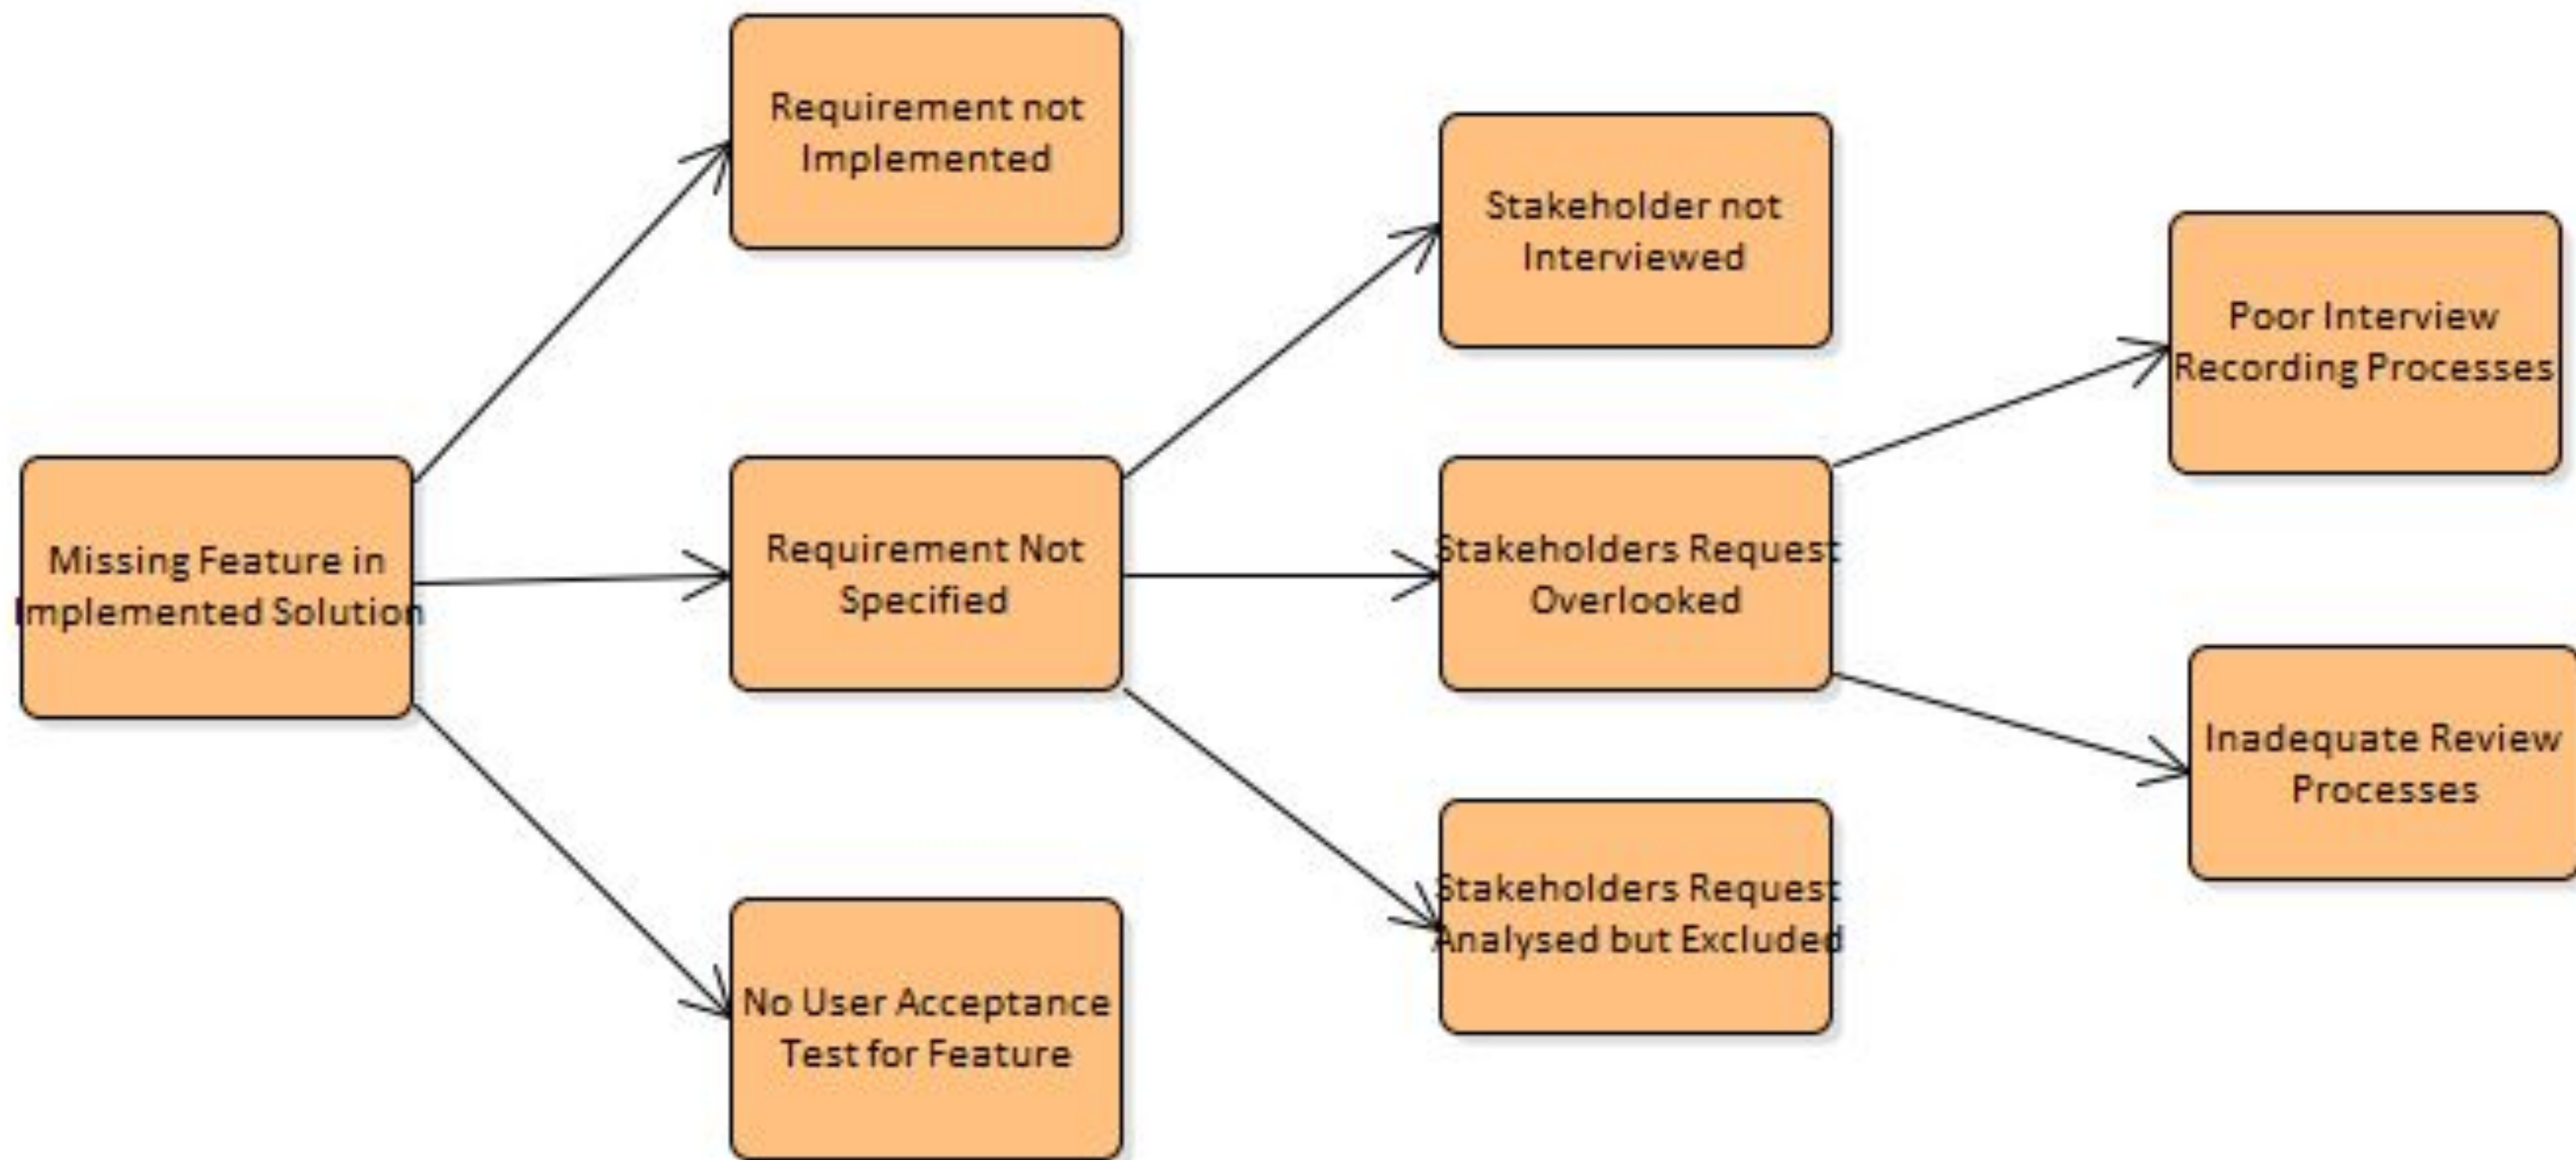

DECISION TREE DIAGRAM

DECISION TREE DIAGRAM

- Graphical decision-analysis tool modeling outcomes with probabilities.
- Evaluates strategic/operational choices under uncertainty.
- Translates decision tables into stakeholder-friendly visualizations.

decision tree Performance Decision Tree

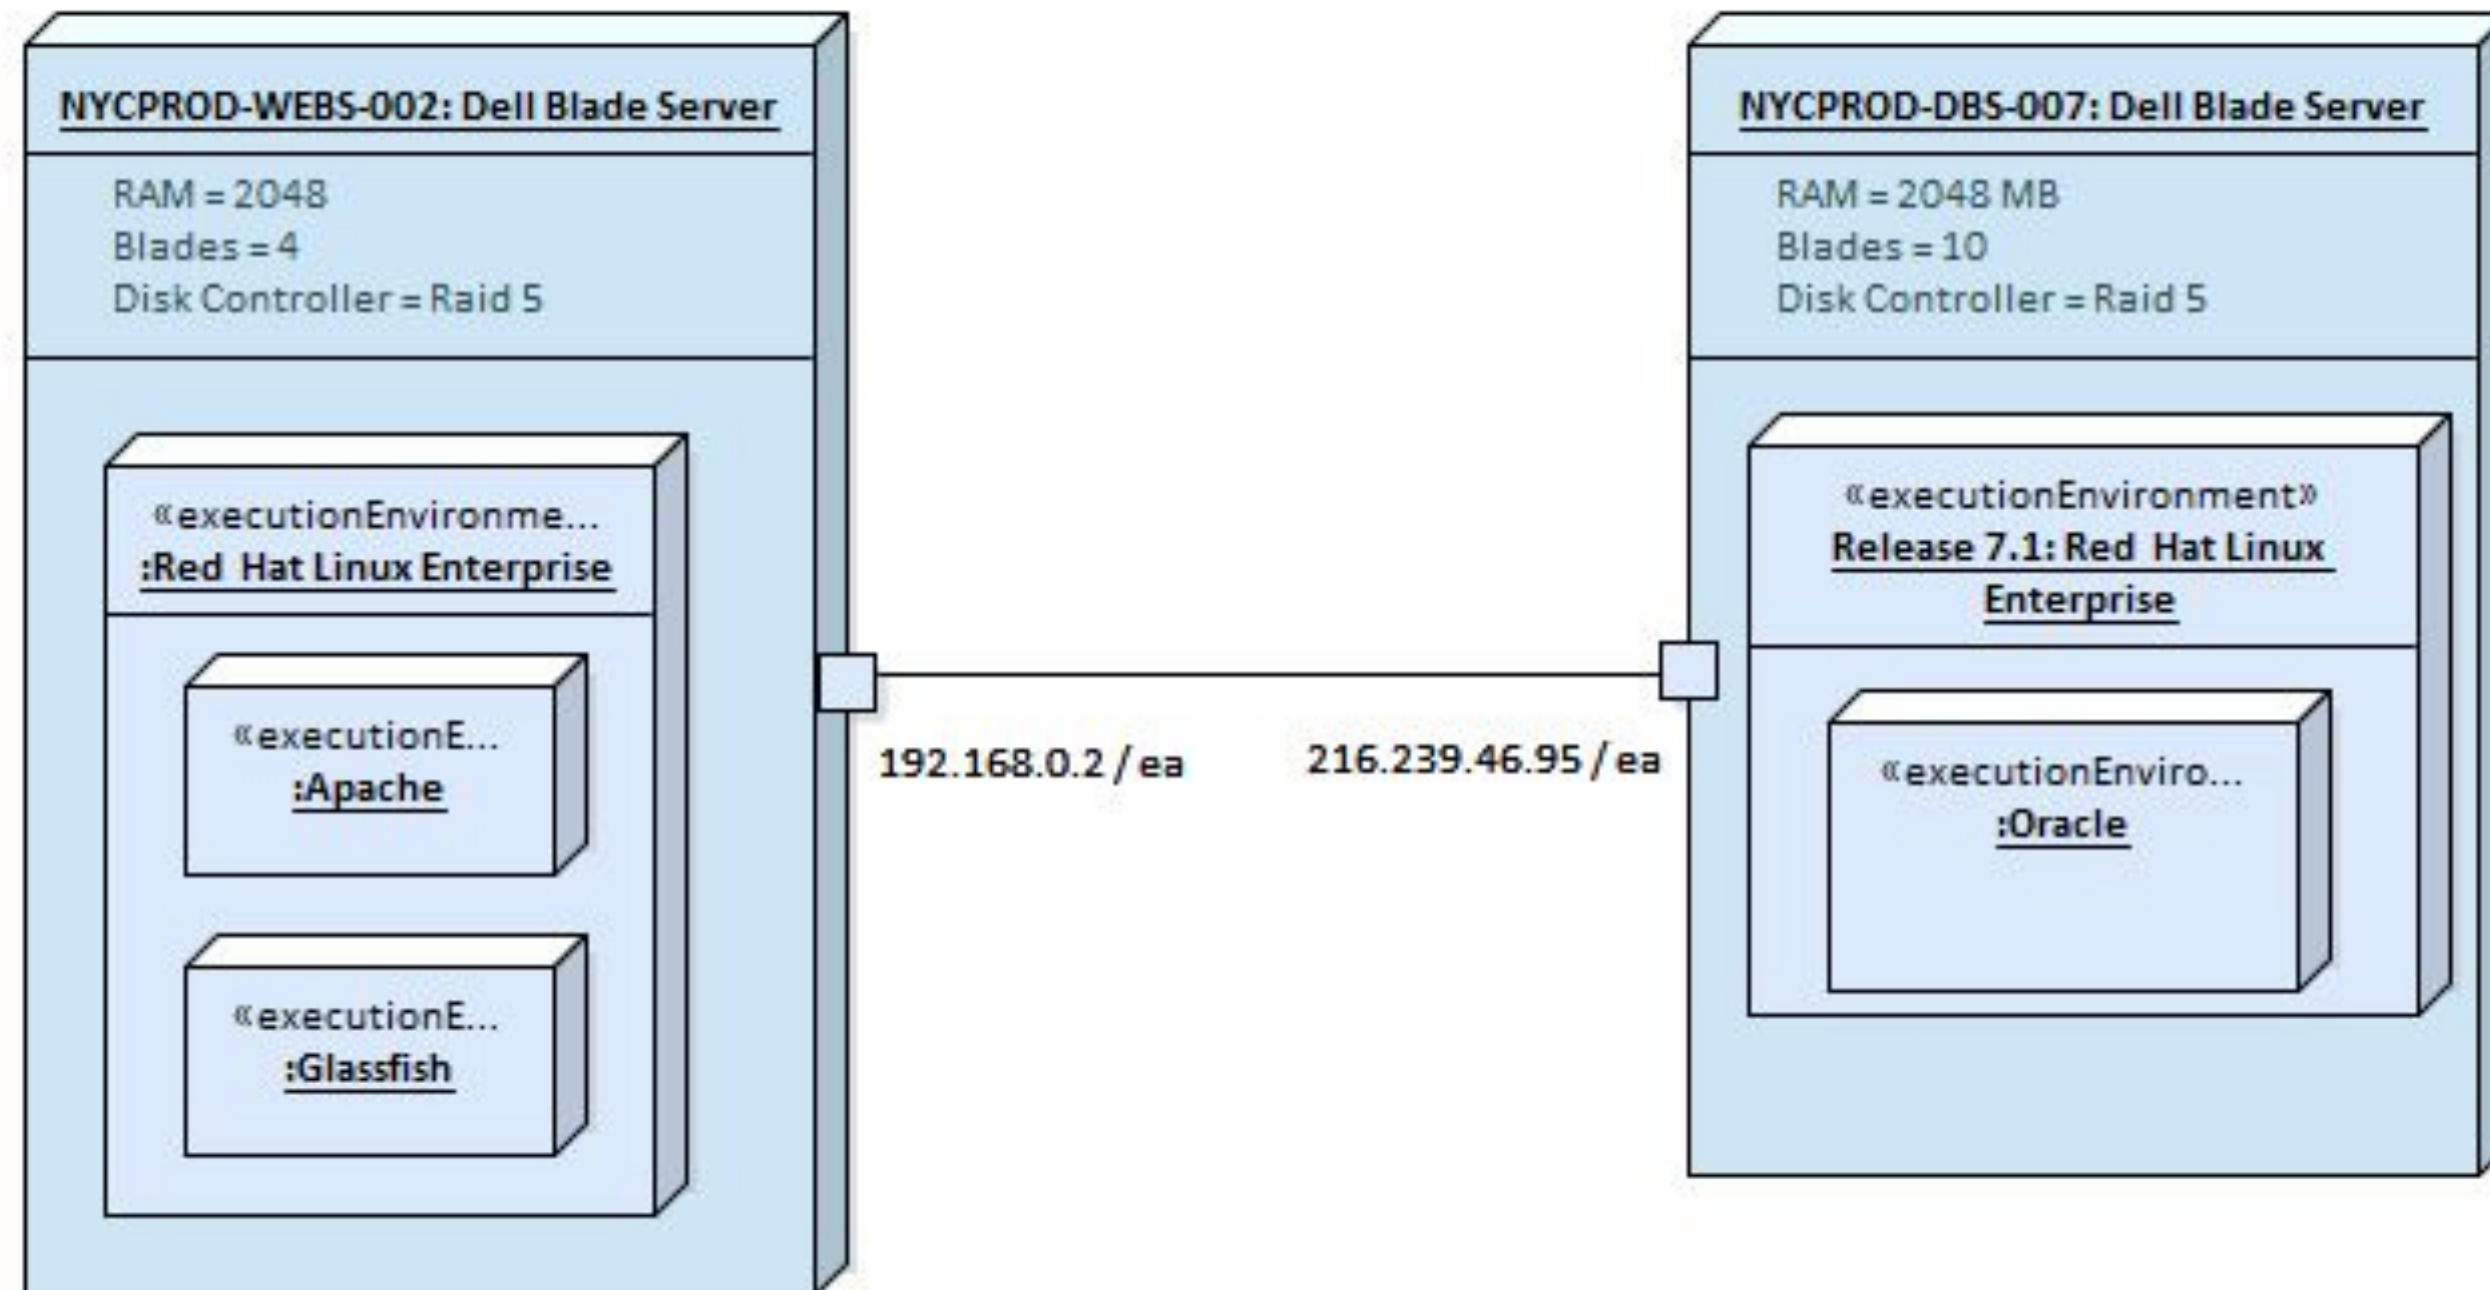

DEPLOYMENT DIAGRAM

DEPLOYMENT DIAGRAM

- UML diagram for physical/virtual infrastructure modeling.
- Maps servers, networks, and software across environments.
- Documents production, test, and development configurations.

This Deployment Diagram shows how environments can be described using building blocks from a Technical Reference Model. The elements on this diagram are instances and in the case of servers are named. A Port has been used to describe the Ethernet connection between the two servers.

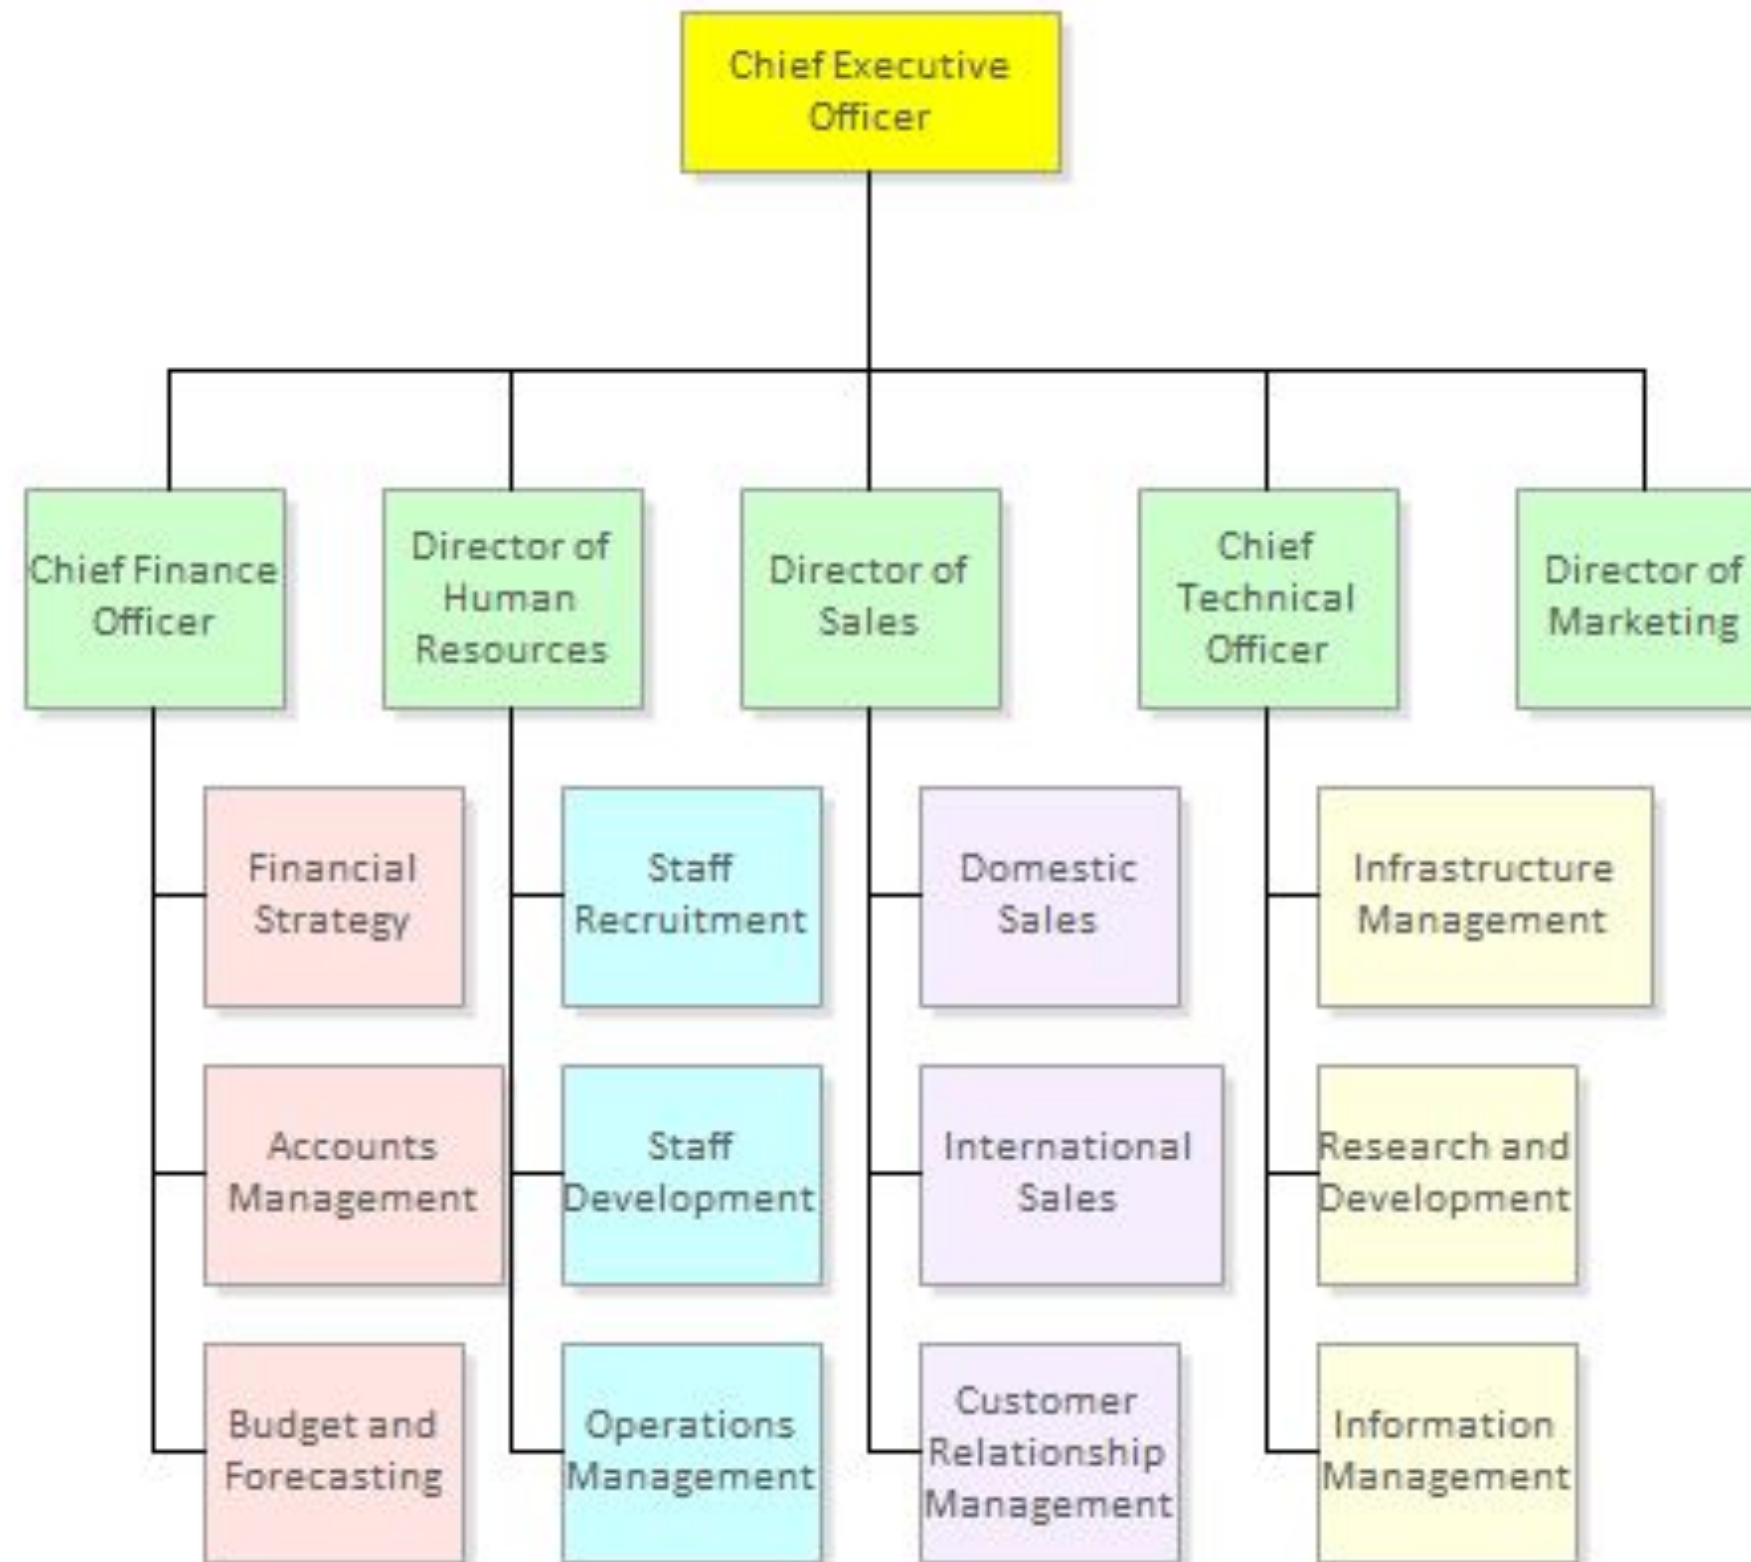

ORGANIZATION AL CHART DIAGRAM

ORGANIZATIONAL CHART

DIAGRAM

- Visualizes reporting structures and communication channels.
- Models functional, market-oriented, or matrix organizations.
- Represents current/future states with custom relationship types.

This Organisation Chart diagram shows how the organizational structure of an Organisation can be represented graphically. Tree Vertical and Lateral Vertical line styles have been used to lay out the diagram.
